

Characters / Story Ideas

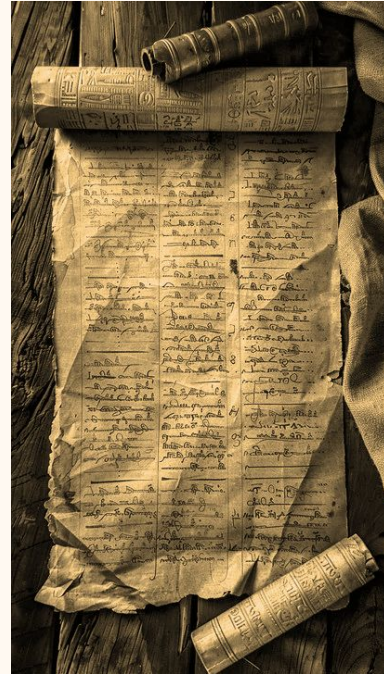

STORY

A traveling gecko explorer discovers **fragments of a map** leading to a forgotten civilization hidden somewhere in the world. But there's a problem:

the civilization recorded all knowledge in an ancient language called **HTML**.

Most people see meaningless symbols. But Gecko slowly learns to interpret the language city by city.

As gecko learns to understand **HTML** the language becomes readable and directions reveal themselves.

Game Idea

- Each level is a new mystery that the character explores.
- Each level is a new city/ background.
- Different characters from the character bank can be added to each city.
- Each city involves a set of clues/ stations with coding problems that teaches Gecko
- Our main character is a **lizard named Gecko** and it is trying to learn the HTML language to decode the instructions on the map.

Character Bank

Level 1

Gecko discovers first fragments.

Learns:

- basic tags
- structure
- opening/closing syntax

```
<title>The Path Begins</title>
```

The tags reveal the different city titles and sections Gecko has to visit.

Featured Characters:

Shadow-Dom

The characters can pop up and offer coding challenges and teach Gecko how to finish Level 1.

Tutorial

Headers are symbols used by the ancient civilization to mark importance and organize information. Larger headers represent major locations such as continents, while smaller headers represent countries and cities beneath them.

Headers look like this: `<h1>BIG TITLE</h1>`

The number beside the h controls the importance level.

```
<h1>Continent</h1>
```

```
<h2>Country</h2>
```

```
<h3>City</h3>
```

```
<!-- Fragment 1 ->
```

```
< h?? > The Path Begins < /h?? >
```

```
<!-- Fragment 2 ->
```

```
<h???>South America<h????>
```

```
<h???>Brazil<h????>
```

```
<h???>Rio de Janeiro<h????>
```

Tutorial

Learns :

- basic tags
- structure
- opening/closing syntax

What finishing this level should unlock:

Headers of the script.

- Names of continents/countries/ cities. Map, navigation menu, status bar(showing current xp)
 - Basic page titles
 - Abilities- can break through small environmental barriers
 - Paragraph decoding
 -
-

Gameplay loop:

- Scan: Players use Gecko's "Lens" to see the hidden HTML behind broken objects (like a bridge or a door)
- Edit: A code panel appears. Players must find the error (e.g. a mission / or a typo)
- Render: Once the code is valid, the object physically materializes in the world, allowing the Gecko to pass.
